A Decade of Swiss Precision

For ten years, AVION Peptides has engineered research-grade peptides from our facility in Bubendorf, Basel-Landschaft — in the heart of Switzerland's life-science corridor. What began as a small synthesis laboratory has grown into a trusted partner for research institutions worldwide, without ever compromising the principle we started with: absolute purity, verified without exception.

“Every vial that leaves Bubendorf carries a decade of accumulated discipline.”

01 SOLID-PHASE SYNTHESIS

Every sequence is built in-house using solid-phase peptide synthesis (SPPS), assembled residue by residue under tightly controlled conditions for maximum fidelity.

02 HPLC + MASS SPECTROMETRY

Each production batch is verified by high-performance liquid chromatography and mass spectrometry. Identity and purity are confirmed before any vial is released.

03 BUBENDORF FACILITY

Our laboratory operates in Bubendorf, Switzerland, alongside some of the most demanding pharmaceutical manufacturing environments in the world.

04 GLOBAL COLD CHAIN

Temperature-controlled logistics carry every order from our Swiss facility to research laboratories worldwide, preserving stability from synthesis to delivery.
